

RACK AND PINION ACTUATORS *BRA-SERIES*

SPACKX

Actuators & Controls

QUALITY ASSURANCE

Spacx Actuators & Controls is the supplier of choice for clients who seek reliable, professional and fast delivery of actuators. Through their extensive knowledge and experience, Spacx Actuators & Controls can expertly advise its customers and provide a high quality product that meets the specifications and requirements of each client. The Spacx management team is dedicated to implementing, facilitating and continuously improving our rigorous quality control systems. We adhere to quality control systems in all our activities.

BRA SERIES ALUMINUM ALLOY ACTUATOR

- ▶ Extruded aluminum ASTM6005 body with internal and external corrosion protection.
- ▶ Honed cylinder surfaces, multiple bearings and guides for low friction and longer lifetime expectancy.
- ▶ Dual rack and pinion design for compact and symmetric construction.
- ▶ Shaft design to prevent blow-out.
- ▶ Modular design for simple field reversing of the fail action.
- ▶ Pre-charged spring cartridges for safe removal.
- ▶ Fully machined rack and pinion for accurate teeth engagement to minimize backlash.
- ▶ Stainless steel fasteners for long term corrosion resistance.
- ▶ Full in compliance with international standards ISO5211 and DIN3337 for valve interface and NAMUR to ensure easy assembly of solenoids and limitswitch enclosures.

Travel Adjustment

External travel stops, +/- 5° independently adjustable in both directions.

Indicator

High visibility position indicator.

High performance springs

Strong corrosion resistant pre-compressed spring cartridges, safely removable.

Actuator Body

Hard anodized extruded aluminum alloy body, precision machined and honed for low friction coefficient and extended life time expectancies.

Pinion

High precision nickel alloy steel pinion to ISO 5211.

End caps

Die cast powder coated endcaps.

Seals

NBR seals for standard temperature range -20°C to +80°C.

Pistons

Dual rack & Pinion design, die cast aluminum hard anodized pistons for symmetrical construction and simple field reversible.

Fasteners

Stainless steel fasteners for long term corrosion resistance.

Bearings & guide

To ensure low friction, easy replaceable.

PARTS AND MATERIALS

OPERATING PRINCIPLE OF DOUBLE ACTING ACTUATOR

Upon air supply to the actuator cylinder port A, between the pistons, the pistons will move outwards causing the shaft to rotate, at the same time the cavities behind the pistons are vented through port B.

Upon air supply to the actuator cylinder port B, behind the pistons, the pistons will move inwards causing the shaft to rotate in opposite direction. at the same time the cavity between the pistons is vented through port A.

OPERATING PRINCIPLE OF SPRING RETURN ACTUATOR

Upon air supply to the actuator cylinder port A, between the pistons, the pistons will move outwards causing the shaft to rotate, at the same time the cavities behind the pistons are vented through port B and the springs are compressed.

Upon loss of air supply to the actuator cylinder port A, the pre-charged springs will drive the pistons to the inward position causing the shaft to rotate in opposite direction.

TECHNOLOGY AND CHARACTERISTICS

BRA series Rack & Pinion actuators are machined and produced according to the highest international standards to achieve a very low friction and to extend the lifetime expectancy beyond 1 million cycles. The actuators are standard finished with a hard anodized treatment for excellent corrosion protection

- Output torques ranging from 8NM to well over 10000NM
- Up to 8 bar(g) maximum supply air
- Pre-charged spring cartridges for safe removal
- Stainless Steel fasteners for long term corrosion resistance
- Dual rack for symmetrical construction

- Operating temperature
Standard: $-20^{\circ}\text{C} + 80^{\circ}\text{C}$
Low temperature: $-40^{\circ}\text{C} + 80^{\circ}\text{C}$
High temperature: $-15^{\circ}\text{C} + 150^{\circ}\text{C}$
- Rotating angles 90° , 120° , 135° , $180^{\circ} \pm 5^{\circ}$ end of travel stop screws
- Mounting Flanges standard according to ISO5211 and DIN3337
- Conform IEC61508, and suitable for use in a SIL-3 environment as a single device
- Suitable for use in hazardous environment to CE, ATEX 94/9/EG
- Dual rack for symmetrical construction

SIZING DOUBLE ACTING ACTUATORS

To select the most suitable double acting actuator for the application, the following information is required.

For example:

Valve torque given = 120 Nm

Safety factor required = 30%

Air supply pressure = 5 bar

$$=120 \text{ Nm} + 30\% = 156 \text{ Nm}$$

According to the table the correct actuator to select is a BRA0160DA with 166 Nm at 5 bar.

-sizing Spring Return Actuators

To select the most suitable Spring return actuator for the application, the following information is required,

For example:

Valve torque given = 120 Nm

Safety factor required = 30%

Air supply pressure = 5 bar

Fail action = Close

$$= 120 \text{ Nm} + 30\% = 156 \text{ Nm}$$

According to the table the correct actuator to select is a BRA0435SR10-FC with 172 Nm end of spring.

Figure 1

Figure A

(figure 1, Figure A)

Output torque of the air stroke

Upon air supply into the actuators cylinder between the two pistons, the pistons will move outwards compressing the springs and drive the output shaft. The output torque will gradually decrease due to increase of spring compression.

Figure 2

Figure B

(figure 2, Figure B)

Output torque of the spring stroke

Upon loss of air supply from the actuators cylinder between the two pistons, the pistons will move inwards due to the relaxation of the springs and drive the output shaft to the fail position. The output torque will then gradually decrease.

MOUNTING STANDARD

Solenoid connection according to NAMUR VDI/VDE-3845 standards

Top drilling for accessories and shaft end according to NAMUR VDI/VDE-3845 standards

Mounting interface according to ISO5211 and DIN 3337 standards

SPRING CONFIGURATIONS

Shown are the spring locations per piston.

Prior to selecting an actuator the following factors must be taken into account:

- Air supply pressure minimum and maximum
- Actuator type, double acting or spring return (single acting)
- In the event of spring return, choosing the desired fail mode, open or close
- Maximum allowable valve stem torque

The information above can be a reason to select an alternative spring size to reduce the output torque on the air stroke.

Alternatively a filter/regulator can be added to the control system.

- Safety Factor

The safety factor is normally 1 given by the valve manufacturer or is a project requirement. If no safety factors are stated it is recommended to add the following factors to the net valve torque figures.

- | | |
|-----------------------------------|---------|
| • Clean lubricating medium | add 30% |
| • Non-lubricating medium | add 40% |
| • Dry gas or air | add 40% |
| • Abrasive non-lubricating medium | add 50% |

OPTIONS

Outside our standard range, the following options are available:

- Extended rotation angle on double acting actuators of 120, 135 or 180 degrees
- Low temperature -40°C to +80°C
- High temperature -15°C to +150°C
- Epoxy powder coating
- Position feedback monitors and air supply accessories

VALVE AUTOMATION / DISTRIBUTION

Spacx Actuators & Controls is the Authorized Distributor Channel for Bettis pneumatic, hydraulic and electric actuators. We are able to supply all Bettis valve actuators including:

Bettis CBB / CBA300-series

Bettis G-series

Bettis Electric

Hytork XL-range

SPACX ROTARY PNEUMATIC & HYDRAULIC ACTUATORS

Spacx Type BYX & Type BCX actuators provide highly reliable actuation for 90° valves and dampers based on the simplicity and reliability of the well proven yoke mechanism. The modular design of the Type BYX & Type BCX allow for the simple removal of the piston cylinder and / or spring cylinder for routine maintenance without having to disconnect the actuator from the valve. The cover of the main actuator body can also be removed to allow easy access to the cam mechanism for inspection or preventative maintenance. Spacx Type BYX & Type BCX actuators are available for both pneumatic and hydraulic applications in either double acting or spring return configurations with a full range of control accessories. Materials of construction include in either steel construction or 316 stainless steel construction with drive shafts of 316 or 17-4PH stainless steel.

PNEUMATIC ACTUATOR	HYDRAULIC ACTUATOR
OPERATING MEDIA Air (dry or lubricated) or noncorrosive gas operating media.	OPERATING MEDIA Mineral oil or equal operating fluid.
SUPPLY PRESSURE RANGE 2 to 10 barg	SUPPLY PRESSURE RANGE Low : 2 to 10 barg High : 10 to 210 barg

SPACX CONTROL SYSTEMS FOR PNEUMATIC & HYDRAULIC ACTUATORS

CONTROL SYSTEMS

The ancillary control systems for actuators are of fundamental importance for providing actuator performance, functionality and reliability.

SOLENOID CONTROL

3/2-Way Single Coil, 5/2-Way Single or Dual Coil versions in both General Purpose and Hazardous Area Options (Ex ia, Ex d & Ex m) in either Stainless Steel, Brass or Aluminium Construction.

POSITION MONITORS

Mechanical or Proximity End of Travel Switch / Sensor, 4 to 20 mA Feedback or Bus Communication versions in both General Purpose and Hazardous Area Options (Ex ia & Ex d) in either Stainless Steel, Aluminium or Engineered Resin Construction.

POSITIONER CONTROL

Pneumatic, Electro-Pneumatic or Digital versions in both General Purpose and Hazardous Area Options (Ex ia & Ex d) in either Stainless Steel or Aluminium Construction.

MISCELLANEOUS CONTROLS

Speed Control, Pilot Valves, Quick Exhaust Systems, Partial Stroke Testing Systems, Pressure Relief Valves and Others.

SPACX

Spacx has considerable experience in this field and can supply bespoke control systems for both pneumatic and hydraulic valve systems to satisfy all of the end client's operational requirements.

Self-contained hydraulic control system for monitoring pipeline pressures and providing shutdown capability where external power sources are not available.
