Actuators & Controls

Valve Actuator Repair and Overhaul

For our valued clients that are considering lowering their footprint, lowering emissions, saving money and are interested in re-cycling and re-using their actuators, we offer overhaul and repair services for all hydraulic and pneumatic actuators that deserve a second life.

All actuators will be functionally and leak tested, and if required we can include for a torque test as well. A standard warranty on the repair/overhaul is 12 months.

Re-use or re-purposing actuators is infinitely better than re-cycling, saving on raw materials on a global scale, therefore we offer in our secondhandshop a small variety of refurbished actuators that otherwise would have been scrapped. We also could be interested in buying your otherwise scrapped on/off actuators. Please contact us for the possibilities.
